

MAHARANI

AGRO PRODUCTS

"Desiccated Coconut Powder is made by drying shredded coconut after removing the brown skin. It is widely used in confectioneries, puddings, and other dishes as a substitute for raw grated coconut."

Desiccated Coconut Powder

Why **Maharani** Desiccated Coconut Powder?

- Maharani desiccated coconut powder is made from the flesh of matured coconuts that have been grated, dried, and ground into a fine powder untouched by human hands.
- We procure coconuts from the Kuttiyadi belt which is considered to be the best in the world. Coconut offers about 68% minimum fat content which makes our brand the most premium in the country.
- This process retains the natural oils and nutrients of the coconut, making it a rich and flavourful ingredient.

Choosing 'Premium' Desiccated Coconut Powder

99%

Aroma & Flavor: The fresh coconut scent and rich, natural taste.

98%

Texture: Granules being uniform in size (fine, medium, or coarse) for your recipes.

99%

Consistency: High-quality desiccated coconut powder provides for better quality control for your recipes.

Production **Process..!**

Selection of Mature Coconuts

Mature coconuts (around 3-5 months old) are selected for higher oil and lower water content.

Dehusking

The outer husk of the coconut is removed either manually or mechanically.

De-shelling

The hard shell is separated from the coconut kernel using a de-shelling machine or manually.

Removal of Testa (Brown Skin)

The brown skin (testa) of the kernel is removed to achieve the desired white color of the powder.

Washing

The de-shelled and de-skinned coconut is washed thoroughly to remove any impurities or contaminants.

Cutting/Shredding

The coconut kernel is then cut or shredded into small pieces to prepare it for drying.

Blanching

The shredded coconut is blanched in hot water to reduce the microbial load and prevent spoilage. This also helps maintain the color.

Drying & Cooling

The shredded coconut is dried in hot air driers (usually at 90°-95°C) to remove moisture, bringing it down to 1.8% to prevent spoilage. After drying, the coconut is cooled to prevent condensation, which could cause clumping and microbial growth.

Packing

The desiccated coconut powder is packed in moisture-proof packaging to preserve freshness and prevent moisture absorption during storage and transportation.

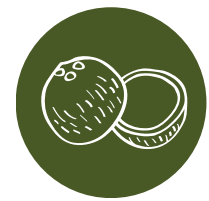

Composition of the Product...?

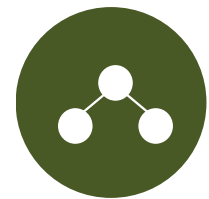

Nature Composition (1.3 – 2.5%)

Ultraviolet & Sun Screen (6.0 – 6.6%)

Oil (68.0 – 70.0%)

Carbohydrate (8.0 – 20.0%)

Crude Fiber (4.0 – 6.0%)

Nutritional **Benefits**

● HEALTHY FATS

- **Kuttiyadi coconut** is high in medium chain triglycerides, which makes it a good choice for a keto diet, Rich in medium-chain triglycerides (MCTs), provides quick energy and supporting weight management.
- **Kuttiyadi coconut** is rich in vitamins, minerals, antioxidants, and calories.

- Lauric acid, the medium chain fatty acid from the fat of the coconut, is having antiviral, antibacterial, and antiprotozoal properties. Capric acid, another of coconut's fatty acid is also found to have antimicrobial properties.
- Coconut fat in the diet leads to a normalization of body lipids, protects against alcohol damage to the liver, and improves the immune system of body.
- Coconut is a natural low - carb, high - fiber food ideally suited for low carbohydrate diets.

● **DIETARY FIBER**

- High in fibre, aiding in digestion and promoting a healthy gut

● **VITAMINS AND MINERALS**

- Contains essential nutrients such as manganese, copper, selenium, iron, potassium, and magnesium

Culinary **Uses**
